

POLYPROPYLENE FILMS

Products	Description	Details
AB9812CP EU	Synthetic silica	Designed for heat sealable PP films
AB1012CP	Organic antiblock	Non-migrating slip and Antiblock for the production of cast PP films. Can also be used in combination with migrating slip agent, for further reduction of COF
AB0357PP	Synthetic silica	Special antiblock additive designed for heat sealable skin layers with low surface roughness
AB6996HP EU	Synthetic silica	Cost effective antiblock for cast PP films based on synthetic silica
SL6925HP	Erucamide	Migrating Slip, designed for heat sealable and plain PP film
SL0302CP	Silicon oil	Non-migrating slip agent for PP films production
SB6998CP	Synthetic silica & erucamide mixture	Fast slip performance, immediately active film production
SB0371PP	Proprietary	Permanent hot slip for Cast PP
ST0245HP	10% Antistatic agents	Antistatic masterbatch provides short and long term activity in PP
ST1441HP	12.6% Antistatic agents	Antistatic masterbatch for BOPP and Cast PP films. Good thermal stability and optical properties
ST2961PP	5% Antistatic agents	For long term activity with minimal influence on converting processes such as printing and lamination
MP80299	60% Concentrated MB	Standard white for PP films, suitable for metallization
MP80698	70% Concentrated MB	Standard white for PP films, suitable for metallization
MP800502	70% Concentrated MB	Outdoor standard white for PP films, suitable for metallization
AF2327CP	Antifog for Cast PP	Antifog additive for barrier multilayer films. Designed for Cast PP sealing layers
BR7783DP EU	Antifog barrier	Special barrier design to prevent migration of Antifog to print / laminated layer
